Specialty Drug List

Prime Therapeutics leverages specialty pharmacy expertise to help plan sponsors develop affordable drug management strategies that keep members healthy. The process begins when the FDA approves a new drug. A clinical committee reviews FDA-approved medicines and develops a recommendation for each drug. Specialty drugs are typically complex, such as biotechnology or orphan drugs, and may be limited distribution, or require special handling, specific administration, or other specialty services. The list below represents the drugs that meet widely accepted clinical considerations to be classified as specialty drugs. Benefit sponsors determine plan formularies and specialty drug benefits, and covered specialty drugs may vary by plan. A member's benefit plan may not cover certain drugs and may or may not classify certain drugs as specialty drugs, regardless of whether a drug is listed here.
